1. Introduction

1.1 Purpose

This document defines the business and functional requirements for the **Branch Cash Management System (BCMS)** for Prabal Motors Private Limited (PMPL). It is the agreed reference against which the solution will be designed, built, tested, and accepted. Every requirement is uniquely identified so it can be traced through design, development, and user acceptance.

1.2 Intended Audience

PMPL management and finance leadership, the internal audit function, branch operations teams, and the implementation partner (business analysis, development, QA, and deployment).

1.3 Overview

PMPL operates a multi-branch automobile **Sales and Service** business. Branch cash is currently managed through **manual registers and physical paperwork**, which is error-prone, slow to reconcile, hard to audit, and offers no real-time visibility to management. BCMS digitises the complete branch cash lifecycle — **collection request** → **cashier verification** → **official receipt** → **cash expense** → **end-of-day closing** → **maker-checker approval** → **bank deposit**

→ **Tally accounting** — under strict role-based access, a complete audit trail, and no-physical-delete controls, surfaced through dashboards and a suite of operational reports.

2. Business Background & Context

PMPL's branches take **cash and online payments** daily from vehicle **sales** (against invoices) and **service/repairs** (against job cards). Physical cash passes through advisors, cashiers, works managers, and branch accountants before being deposited at the bank and accounted for in **Tally**.

This is a classic **segregation-of-duties** domain: sound cash control requires that no single person collects, counts, and banks cash; that drawers are reconciled daily with dual sign-off; and that deposits and audit records are tracked immutably. BCMS is intended to enforce these controls consistently across the network while giving management end-to-end visibility.

3. Business Objectives

ID	Business Objective	Priority
BO-01	Digitise the end-to-end branch cash collection workflow, replacing manual cash registers.	Must
BO-02	Standardise branch cash operations across both Sales and Service verticals.	Must
BO-03	Provide end-to-end visibility of every rupee from collection through to accounting.	Must
BO-04	Implement maker-checker (four-eyes) approvals across cash workflows.	Must
BO-05	Enable real-time operational and financial dashboards at branch, state, and corporate levels.	Must
BO-06	Improve audit compliance and reduce reconciliation and audit effort.	Must
BO-07	Establish a foundation for future integration with Tally and other systems.	Should
BO-08	Scale the solution across all branches of the dealership network.	Must

4. Current-State Problems

ID	Problem
BP-01	Cash operations recorded in manual registers cause errors, delays, and weak auditability.
BP-02	No standard process — Sales and Service branches handle cash inconsistently.
BP-03	No end-to-end visibility from collection to accounting; management cannot see status in real time.
BP-04	Weak segregation of duties / approval controls increase the risk of error and fraud.
BP-05	Reconciliation between branch cash, deposits, and Tally accounting is manual and error-prone.
BP-06	Delayed or unverified bank deposits create cash-in-hand exposure.
BP-07	No consolidated view of exceptions (cash differences, pending closings/deposits) across the network.

5. Project Scope

5.1 In Scope (this release)

1. **Master Data Management** – branches, employees/users, customers, expense heads, banks, pickup agencies, ledgers.
2. **Collection Request** – advisor-initiated, mandatory documents, unique ID, status tracking.
3. **Cashier Verification** – search, verify, reject/accept, denomination or online-reference capture.
4. **Receipt Generation** – official, unique, immutable receipts (print / PDF).
5. **Cash Expense** – voucher, head, amount, approver, attachment, automatic cash reduction on approval.
6. **Cash Closing** – opening, collections, expenses, deposits, expected vs physical, variance and reason.
7. **Approval Workflow** – Cashier → Works Manager → Branch Accountant → Closed (maker-checker).
8. **Bank Deposit** – direct or pickup agency, slip and acknowledgement, verification.
9. **Accounting Update** – Tally voucher, dates, ledger, accounting status (manual entry in this release).
10. **Dashboards** – branch, state/cluster, corporate, trend, and exception views.
11. **Reports** – nine operational reports with filtering and export.
12. **Notifications** – in-app alerts for the defined triggers.
13. **Security & Audit** – role-based access, data scoping, complete audit trail, no physical delete, document versioning.

5.2 Out of Scope (future enhancements)

The following are explicitly **deferred** to later phases and are **not** part of this release:

- Live **Tally API** auto-posting and reconciliation (manual voucher entry in this release).
- **Bank statement API** integration.
- **WhatsApp / SMS / email** notifications (in-app only in this release).
- **Power BI / Zoho Analytics** business-intelligence reporting.
- **OCR** for deposit slips and bills.
- **Payment-gateway** integration for online collections (transaction-reference capture only in this release).
- **Offline / PWA** operation.
- **Customer-facing portal**.
- Creation of invoices, job cards, or inventory (BCMS **references** these documents; it does not create them).

6. Stakeholders

6.1 Business / Governance Stakeholders

ID	Stakeholder	Interest
SH-01	CFO / Admin	Financial control, compliance, corporate-wide visibility, system ownership.
SH-02	Corporate Finance	Consolidated reporting, accounting completeness, policy enforcement.
SH-03	Cluster / State Finance	Multi-branch oversight within a cluster/state, exception follow-up.

ID	Stakeholder	Interest
SH-04	Internal Audit	Audit-trail integrity, compliance reporting, control testing.
SH-05	Branch Management (Works Manager)	Branch-level approvals, closing sign-off, operational throughput.
SH-06	IT / Implementation Team	Delivery, deployment, integration, support.

6.2 Operational Users

Sales Advisor, Service Advisor, Cashier, Works Manager, Branch Accountant, Cluster Finance, Corporate Finance, Internal Audit, CFO / Admin.

6.3 External Stakeholders

ID	Stakeholder	Interest
SH-17	Customer	Pays cash/online; receives an official receipt.
SH-18	Bank	Receives deposits; provides acknowledgements.
SH-19	Cash Pickup Agency	Collects cash from the branch for deposit.
SH-20	Tally / Accounting System	Downstream system of record for accounting.

7. User Roles & Responsibilities

Each user is scoped to their **branch, cluster, or the whole network** and sees only the data their role permits.

Role	Primary responsibilities	Data scope
Sales Advisor	Raise collection requests for sales (against invoice); attach documents; track and correct own requests.	Own branch (own requests)
Service Advisor	Same as Sales Advisor, for service collections (against job card).	Own branch (own requests)
Cashier	Verify requests; accept/reject; collect payment; issue receipts; record expenses & deposits; perform end-of-day closing.	Own branch (own drawer)
Works Manager	First-level (L1) approval of cash closings; approve/reject expenses within limits; monitor branch operations.	Own branch
Branch Accountant	Second-level (L2) verification of physical cash & finalisation of closing; verify deposits; record accounting to Tally.	Own branch
Cluster Finance	Oversight across branches in a cluster; monitor exceptions; drive reconciliation.	Cluster (many branches)
Corporate Finance	Network-wide oversight, consolidated reporting, policy monitoring, accounting completeness.	All branches
Internal Audit	Independent, read-only review of controls, audit trail, and compliance.	All branches (read-only)

Role	Primary responsibilities	Data scope
CFO / Admin	System ownership; manage masters, users, roles, and configuration; corporate oversight.	All branches

Universal control (maker-checker): the user who creates or initiates a transaction can **never** approve their own transaction.

7.1 Role × Module Permission Overview

Legend: **C** Create · **R** Read · **U** Update · **A** Approve/Verify · **X** Export/Admin · **—** No access.

Module	Advisor	Cashier	Works Manager	Branch Accountant	Cluster / Corporate Finance	Internal Audit	CFO / Admin
Master Data & Users	—	—	—	—	—	R	C R U X
Collection Request	C R U (own)	R U (verify)	R	R	R	R	R
Receipt	R (own)	C R	R	R	R	R	R
Cash Closing	—	C R U	A (L1)	A (L2)	R	R	R
Cash Expense	—	C R	A	A / R	R	R	R
Bank Deposit	—	C R	R	A (verify)	R	R	R
Accounting	—	—	R	C R U A	R	R	R
Dashboards & Reports	R (own)	R (branch)	R X (branch)	R X (branch)	R X (cluster/corp)	R X (all)	R X (all)
Audit Log	—	—	R (branch)	R (branch)	R (cluster/corp)	R (full)	R (all)

8. End-to-End Business Workflow

The complete cash lifecycle, from the customer's payment to Tally accounting:

1. **Advisor** initiates a collection request with the customer's details, the reference document (invoice for sales, job card for service), the amount, the expected payment mode, and **mandatory supporting documents**.
2. The customer approaches the **cashier**, who **verifies** the request and documents.
3. If details are incorrect, the cashier **rejects with remarks** and the request returns to the advisor for correction; otherwise the cashier **accepts**.
4. Payment is **collected and verified** — cash (with denomination breakdown), online (with transaction reference), or a mix (which must total the amount).
5. The system generates an **official, uniquely numbered receipt** (printable / PDF), which cannot be edited afterwards.
6. During the day, **cash expenses** and **bank deposits** are recorded (each with the required approvals and documents).
7. At day-end, the **cashier performs cash closing** — the system computes expected cash and the cashier enters the physical count; any variance requires a mandatory reason.
8. The **Works Manager approves** the closing (or rejects it back for correction).

9. The **Branch Accountant verifies physical cash and transactions** and finalises the closing; the day is then **locked** and becomes the next day's opening balance.
10. Cash is **deposited** at the bank or handed to a **pickup agency**, with the slip and acknowledgement uploaded and verified.
11. **Accounting** is completed by recording the **Tally voucher** details and marking the record **reconciled**.

Every step notifies the relevant user in-app and is recorded in an immutable audit trail.

9. Functional Requirements

Requirements are grouped by functional module. Each is atomic and testable. Priority uses MoSCoW: **Must, Should, Could**.

9.1 Master Data Management

ID	Requirement	Priority
FR-MDM-01	Maintain a Branch master (code, name, cluster, state, type: Sales/Service/Both, status).	Must
FR-MDM-02	Maintain an Employee/User master with role assignment and branch mapping.	Must
FR-MDM-03	Maintain a Customer master (name, contact, identifiers), reusable across requests.	Must
FR-MDM-04	Maintain an Expense Head master for expense categorisation.	Should
FR-MDM-05	Maintain Bank Account / deposit destination and Pickup Agency masters.	Should
FR-MDM-06	Maintain a Ledger master for accounting mapping to Tally.	Should
FR-MDM-07	Manage master data via an Admin Masters screen restricted to authorised roles.	Must
FR-MDM-08	Support activate/deactivate for master records (no physical delete — see BR-05).	Must

9.2 Collection Request

ID	Requirement	Priority
FR-CR-01	An Advisor (Sales/Service) shall initiate a collection request capturing customer details.	Must
FR-CR-02	Capture the reference document: invoice number (Sales) or job card number (Service) .	Must
FR-CR-03	Capture the amount to be collected.	Must
FR-CR-04	Capture the expected payment mode (cash / online / mixed).	Must
FR-CR-05	Require mandatory document upload before submission.	Must
FR-CR-06	Generate a unique Request ID for every request.	Must
FR-CR-07	Provide status tracking through the request lifecycle.	Must
FR-CR-08	Allow an advisor to view the status/queue of their own requests.	Should

9.3 Cashier Verification

ID	Requirement	Priority
FR-CV-01	Search for a request (by Request ID, customer, invoice/job card).	Must
FR-CV-02	Verify submitted documents against the request.	Must
FR-CV-03	Reject a request with mandatory remarks, returning it to the advisor.	Must
FR-CV-04	Accept a request and proceed to collect payment.	Must
FR-CV-05	For cash payments, capture denomination details.	Must
FR-CV-06	For online payments, capture the transaction reference .	Must
FR-CV-07	Verify the collected payment total before receipt generation.	Must
FR-CV-08	A rejected request shall be editable and resubmittable by the advisor.	Must

9.4 Receipt Generation

ID	Requirement	Priority
FR-RCPT-01	Generate an official receipt upon accepted and verified payment.	Must
FR-RCPT-02	Each receipt shall have a unique, sequential, non-editable number (see BR-08).	Must
FR-RCPT-03	Record amount, mode, reference, customer, cashier, branch, and date/time.	Must
FR-RCPT-04	The receipt shall be printable / downloadable (PDF) .	Should
FR-RCPT-05	A generated receipt shall be immutable ; corrections require a controlled cancellation/reversal.	Should

9.5 Cash Closing & Approval

ID	Requirement	Priority
FR-CLS-01	The Cashier shall perform end-of-day cash closing for their cash point.	Must
FR-CLS-02	Record opening cash .	Must
FR-CLS-03	Aggregate cash collections for the period.	Must
FR-CLS-04	Aggregate online collections for the period.	Must
FR-CLS-05	Subtract expenses for the period.	Must
FR-CLS-06	Subtract deposits for the period.	Must
FR-CLS-07	Compute expected closing cash = opening + cash collections – expenses – deposits.	Must
FR-CLS-08	Capture the physical (actual) cash counted.	Must
FR-CLS-09	Compute variance = physical – expected.	Must
FR-CLS-10	Where variance $\neq$ 0, require a mandatory variance reason .	Must
FR-CLS-11	Submitting a closing shall route it into the approval workflow.	Must
FR-CLS-12	The closing approval chain shall be Cashier → Works Manager → Branch Accountant → Closed .	Must
FR-CLS-13	The Works Manager shall approve/reject the closing (with remarks).	Must
FR-CLS-14	The Branch Accountant shall verify physical cash & transactions and finalise the closing.	Must

9.6 Cash Expense

ID	Requirement	Priority
FR-EXP-01	Record a cash expense with a voucher number .	Must
FR-EXP-02	Capture the expense head (category).	Must
FR-EXP-03	Capture the amount .	Must
FR-EXP-04	Capture the approver .	Must
FR-EXP-05	Support an attachment (bill/voucher image).	Must
FR-EXP-06	An approved expense shall automatically reduce the cash balance .	Must
FR-EXP-07	Expenses shall be subject to approval before affecting the cash balance.	Must

9.7 Bank Deposit

ID	Requirement	Priority
FR-DEP-01	Record a bank deposit as a direct deposit or via a pickup agency .	Must
FR-DEP-02	Upload the deposit slip .	Must
FR-DEP-03	Upload the bank/agency acknowledgement .	Must
FR-DEP-04	Support deposit verification by an authorised role.	Must
FR-DEP-05	Record amount, date, bank/agency, and reference.	Must
FR-DEP-06	A verified deposit shall reduce cash-in-hand and feed the cash closing.	Must

9.8 Accounting Update

ID	Requirement	Priority
FR-ACC-01	Record the Tally voucher number .	Must
FR-ACC-02	Capture the voucher date .	Must
FR-ACC-03	Capture the posting date .	Must
FR-ACC-04	Capture the ledger used for the entry.	Must
FR-ACC-05	Maintain an accounting status (Pending / Posted / Reconciled).	Must
FR-ACC-06	Support reconciliation of records against Tally (manual now; API in future).	Should

9.9 Dashboards

ID	Requirement	Priority
FR-DASH-01	Provide a Branch dashboard (branch-scoped KPIs).	Must
FR-DASH-02	Provide a State/Cluster dashboard (aggregated across branches).	Must
FR-DASH-03	Provide a Corporate dashboard (network-wide KPIs).	Must
FR-DASH-04	Provide trend analysis views.	Should
FR-DASH-05	Provide an Exception dashboard (variances, pending items, overdue deposits).	Must

ID	Requirement	Priority
FR-DASH-06	Dashboards shall reflect near real-time data.	Should

9.10 Reports

See **Section 12** for the report catalogue. Requirements **FR-RPT-01 ... FR-RPT-10**.

9.11 Notifications

ID	Requirement	Priority
FR-NOTIF-01	Notify relevant users of rejected requests .	Must
FR-NOTIF-02	Notify approvers of pending approvals .	Must
FR-NOTIF-03	Notify relevant users of pending closings .	Must
FR-NOTIF-04	Notify relevant users of pending deposits .	Must
FR-NOTIF-05	Notify relevant users of accounting pending .	Must
FR-NOTIF-06	Notifications shall be delivered in-app at minimum (email/WhatsApp are future).	Should

9.12 Security, Access Control & Audit

ID	Requirement	Priority
FR-AUTH-01	Authenticate users via secure login .	Must
FR-AUTH-02	Enforce role-based access control (RBAC) .	Must
FR-AUTH-03	Enforce branch/cluster/state data scoping so users see only permitted data.	Must
FR-AUTH-04	Maintain a complete, immutable audit trail of all significant actions.	Must
FR-AUTH-05	Enforce maker-checker separation of duties on approvals.	Must
FR-AUTH-06	Maintain document version history for uploaded documents.	Must
FR-AUTH-07	Support soft delete only (no physical delete) for business records.	Must

10. Business Rules

ID	Business Rule
BR-01	A collection request cannot proceed to payment without all mandatory documents uploaded.
BR-02	The closing approval chain is fixed : Cashier → Works Manager → Branch Accountant → Closed. No step may be skipped.
BR-03	Maker ≠ Checker — the user who creates a transaction cannot approve their own transaction.
BR-04	A cash closing with a non-zero variance requires a mandatory reason before submission.

ID	Business Rule
BR-05	No physical deletion of business records; records are archived/cancelled with a reason and retained.
BR-06	An approved expense automatically reduces the cash balance.
BR-07	A deposit must have both a slip and an acknowledgement to be marked verified.
BR-08	Receipt numbers are unique, sequential per branch/series, and non-editable once issued.
BR-09	A rejected request returns to the advisor with mandatory remarks and re-enters the workflow on correction.
BR-10	Expected closing cash = Opening + Cash Collections – Expenses – Deposits (online collections do not affect physical cash).
BR-11	A record's accounting status must reach a terminal state (Posted/Reconciled) for the transaction to be complete.
BR-12	Users may only act on data within their assigned branch/cluster/state scope .
BR-13	Every uploaded document change is versioned ; prior versions are retained.
BR-14	Online collections are reconciled against the online reference and do not enter the physical cash count.

11. Non-Functional Requirements

ID	Category	Requirement	Priority
NFR-AVAIL-01	Availability	Provide ≥ 99.5% availability .	Must
NFR-USE-01	Usability	UI shall be responsive and usable on web and mobile browsers.	Must
NFR-USE-02	Usability	Core workflows completable on a mobile device.	Should
NFR-SEC-01	Security	Enforce role-based security and least-privilege access.	Must
NFR-SEC-02	Security	Data in transit over TLS 1.2+ ; sensitive data at rest encrypted.	Must
NFR-PERF-01	Performance	Search results within ≤ 2 seconds for typical datasets.	Must
NFR-PERF-02	Performance	Standard list/read screens load within ≤ 3 seconds (P95).	Should
NFR-SCAL-01	Scalability	Scale to all branches (multi-branch, multi-cluster, multi-state).	Must
NFR-AUDIT-01	Auditability	Log all state-changing actions with actor, timestamp, before/after values.	Must
NFR-COMPAT-01	Compatibility	Support current versions of Chrome, Edge, Safari, Firefox.	Should
NFR-MAINT-01	Maintainability	Modular, maintainable architecture.	Must
NFR-LOCAL-01	Localisation	Currency in INR (₹) ; dates DD-MM-YYYY ; timezone IST .	Should
NFR-BACKUP-01	Recoverability	Automated daily backups; RPO ≤ 24h, RTO ≤ 4h .	Should

ID	Category	Requirement	Priority
NFR-RETAIN-01	Data Retention	Financial & audit records retained ≥ 8 years (subject to confirmation).	Should

12. Reports & Dashboards

12.1 Reports

All reports support **filtering** (branch, date range, status) and **export** (PDF / Excel) — [FR-RPT-10](#) .

ID	Report	Purpose (business question answered)
FR-RPT-01	Daily Cash Book	What happened to cash at this branch today?
FR-RPT-02	Collection Register	What did we collect, from whom, and how?
FR-RPT-03	Expense Register	What was spent, under which head, approved by whom?
FR-RPT-04	Deposit Register	What has been deposited to the bank?
FR-RPT-05	Pending Deposits	What cash is still to be deposited or acknowledged?
FR-RPT-06	Pending Closings	Which branches have not closed their day?
FR-RPT-07	Cash Difference	Where are the variances, and why?
FR-RPT-08	Accounting Pending	What still needs to be posted to Tally?
FR-RPT-09	Compliance	Is the audit trail complete and are controls being followed?

12.2 Dashboards

Dashboard	Scope
Branch dashboard	Cash status and KPIs for a single branch.
State / Cluster dashboard	Rolled up across a group of branches.
Corporate dashboard	The whole network at a glance.
Exception dashboard	Variances, pending items, and overdue deposits in one place.
Trend views	Collections and cash movement over time.

13. Data Entities (High-Level)

The system maintains, at minimum, the following business entities (detailed data design is produced during solution design):

Branch · Employee/User · Customer · Collection Request · Receipt · Cash Expense · Bank Deposit · Cash Closing (with Approval trail) · Accounting Status · Master data (Expense Head, Bank, Pickup Agency, Ledger) · Document Attachment (versioned) · Audit Log.

14. Assumptions

ID	Assumption
AS-01	"Online collections" means card/UPI/net-banking captured with a transaction reference — not a payment-gateway integration in this release.
AS-02	One "cash point" ≈ one cashier per branch per day; multi-cashier branches are supported by design, with a single closing per cashier per day as the base case.
AS-03	Tally integration in this release is manual entry of voucher details (no live API).
AS-04	Notifications in this release are in-app ; email/WhatsApp are deferred.
AS-05	The organisational hierarchy is Branch → Cluster → State → Corporate .
AS-06	Document uploads are images/PDFs, stored securely and versioned .
AS-07	BCMS references invoices and job cards from existing systems; it does not generate them.

15. Constraints

ID	Constraint
CON-01	Delivered as a responsive web application accessed through the browser.
CON-02	Tally remains the accounting system of record; reports must reconcile to Tally. A direct Tally API is a future enhancement.
CON-03	Bank API, WhatsApp notifications, BI analytics, and OCR are out of scope for this release.
CON-04	The solution is built on Odoo 19 Community Edition (open-source; no per-user licence fees) as a single custom application, self-hosted by/for PMPL. No Odoo Enterprise licensing is required.
CON-05	Currency is INR ; operations are India-based (statutory, timezone, language).
CON-06	The system must operate across a multi-branch, multi-cluster, multi-state hierarchy.
CON-07	Maker-checker and no-physical-delete compliance postures apply throughout.

16. Risks

ID	Risk	Mitigation
RSK-01	Requirement ambiguity leads to scope creep during build.	Sign-off on this BRD; resolve open points (Section 19) before build.

ID	Risk	Mitigation
RSK-02	Tally reconciliation expectations exceed manual-entry capability in this release.	Confirm manual-entry scope; plan Tally API for a later phase.
RSK-03	Insufficient fraud control if maker-checker is not rigorously enforced.	Enforce maker-checker and no-delete in the system; audit trail on all actions.
RSK-04	Low-connectivity branches may struggle with an online-only application.	Confirm connectivity; consider mitigations if offline operation is required.
RSK-05	Adoption risk – staff reverting to manual registers.	Training, change management, and management reporting on adoption.

17. Success & Acceptance Criteria

ID	Criterion	Measure
SC-01	End-to-end workflow operates without any manual register .	100% of in-scope cash transactions captured in BCMS.
SC-02	All approvals captured digitally with maker-checker.	100% of closings/expenses have a complete, auditable approval chain.
SC-03	Reports reconcile with Tally .	Daily cash book and registers reconcile with zero unexplained differences.
SC-04	Complete audit trail available.	Every state-changing action is traceable to actor + timestamp + before/after.
SC-05	Real-time dashboards operational at branch/state/corporate levels.	Dashboards reflect data within the agreed freshness window.
SC-06	System adopted across all targeted branches .	Rollout completion across the planned branches.

18. Solution Approach & Delivery Phases

18.1 Approach

BCMS will be delivered as a **single custom application built on Odoo 19 Community Edition** – an established open-source business platform. This provides secure authentication, role-based access, document management, reporting, and a responsive web interface out of the box, keeping the build focused on PMPL's cash-management workflows. **Tally remains the accounting book of record**. The system is **self-hosted** for PMPL, with no Odoo Enterprise or per-user licence fees.

18.2 Recommended Delivery Phases

Phase	Scope
Phase 1	Master data & the collection workflow (request → verification → receipt).
Phase 2	Cash closing, expenses, and deposits, with the maker-checker approval chain.
Phase 3	Accounting status and the report suite.

Phase	Scope
Phase 4	Dashboards and future integrations (Tally API, notifications channels, etc.).

Phasing is a delivery recommendation; sequencing and grouping will be confirmed during planning.

19. Open Points / Clarifications Required

The following require confirmation from PMPL. None block a first-pass design, but each affects detailed scope.

ID	Clarification	Priority
CLR-01	Scope of "online collections" — payment-gateway integration, or transaction-reference capture only?	High
CLR-02	Tally integration for this release — manual voucher entry vs. live API.	High
CLR-03	Expected data volumes — number of branches, users, and transactions/day.	High
CLR-04	Receipt format and any statutory / GST requirements for official receipts.	High
CLR-05	Approval thresholds/limits (e.g., expense approval by amount, variance escalation limits).	Medium
CLR-06	Confirmation of the organisational hierarchy and data-scoping rules per role.	Medium
CLR-07	Multi-cashier / multi-shift model per branch and closing granularity.	Medium
CLR-08	Notification channels for this release (in-app only vs. email).	Low
CLR-09	Data-retention and period-locking policies.	Medium
CLR-10	Whether offline / low-connectivity operation is required for any branches.	Medium
CLR-11	SLA, environments, and go-live acceptance.	Medium
CLR-12	Whether single sign-on (corporate identity provider) is required.	Low

20. Glossary

Term	Meaning
BCMS	Branch Cash Management System — the product described in this document.
Maker-checker	A control where the person who creates a transaction is not the person who approves it (four-eyes).
Cash closing	The end-of-day reconciliation of a cashier's drawer (expected vs physical cash).
Variance	The difference between physical cash counted and the expected cash.
Collection request	An advisor-raised request to collect a payment from a customer.
Pickup agency	A cash-in-transit agency that collects cash from a branch for deposit.
Cluster	A group of branches; part of the Branch → Cluster → State → Corporate hierarchy.
Tally	PMPL's accounting system and book of record.
RBAC	Role-Based Access Control.
Audit trail	An immutable log of who did what and when.

Appendix A – Screen List

Login · Dashboard · Collection Request · Cashier Queue · Receipt · Cash Closing · Approvals · Expenses · Deposits · Accounting · Reports · Admin Masters.

Appendix B – Requirement Coverage Summary

Category	Count
Business Objectives (BO)	8
Current-State Problems (BP)	7
Functional Requirements (FR)	78
Non-Functional Requirements (NFR)	14
Business Rules (BR)	14
Constraints (CON)	7
Assumptions (AS)	7 (summary)
Risks (RSK)	5
Success Criteria (SC)	6
Clarifications (CLR)	12
